

# Free flow side to nose check valve with bypass orifice and port 3 blocked

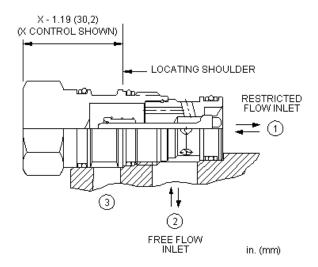

Capacity: 15 gpm (60 L/min.)

> Model: CNCD

#### Product Description

Free-flow, side-to-nose cheater check valves with a bypass orifice function as a 2-port check valve in a 3-port cavity. They allow free flow from port 2 to port 1 with a customer specified orifice that controls flow from port 1 to port 2. Port 3 of the cartridge is blocked off.

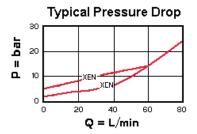

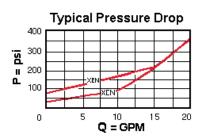

### Technical Features

- When used in a full time regeneration circuit these valves allow full force
  to be developed by the cylinder when it comes to a stop. The bypass
   Incorporates the Sun floating style construction to minimize the
  possibility of internal parts binding due to excessive installation orifice drops the rod end pressure to zero when flow out of the rod stops.
  - possibility of internal parts binding due to excessive installation torque and/or cavity/cartridge machining variations.
